In regards of the difference between Professional and Company, here are some details to clarify:

I will call <u>Professional</u> to a independent worker, contractor or freelancer, someone who provides a service, this person *could* have helpers or not, but he/she will be responsible, he/she will enter his "Cédula de Identidad" is a Federal personal ID, like a Social Security Number, for tax purposes and so on.

As you can see all the information is personal, Cédula, Date of birth, Home address...

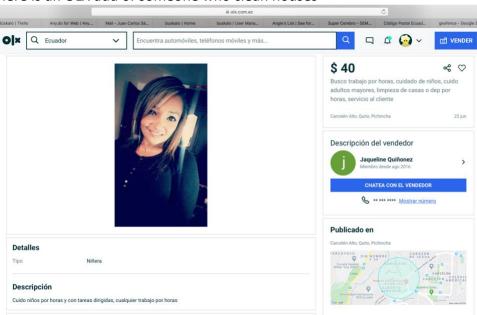

A Company is a "registered enterprise", they will have a RUC instead of Cédula, we can verify the RUC online

https://srienlinea.sri.gob.ec/sri-en-linea/SriRucWeb/ConsultaRuc/ConsultaSconsultaRuc, instead of someone's DOB they will enter since when (year) is incoporated, etc.

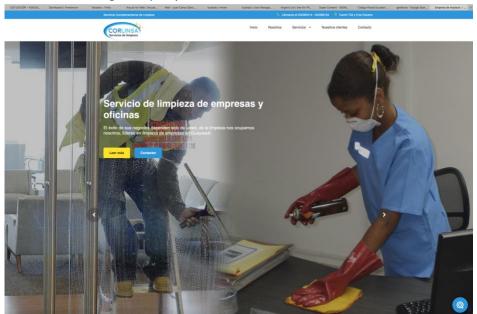

The resposability goes to the Company not to a person.

A real life example:

Here is an OLX add of someone who clean houses

Here is a Cleaning Company Service

<u>They all receive the same oportunity leads</u>, but the 3 first who buy the information will be able to contact the user (customer) and give them an estimate...

The customer will decide who fit better for his/hers needs, the comparison chart will be a good tool to choose the best independent professional or Company to hire.
